

## Wilson Warehouse BCP to Mitigate the Effects of Coronavirus

Wilson Warehouse is implementing these specific steps to reduce the likelihood of workplace exposure and transmission of the Coronavirus.

- We are making hand sanitizers available to employees.
- We are encouraging sick employees to stay at home and utilize their paid sick leave to cover the days out.
- We are collaborating with our temp and contractor firms to do the same.
- Employees are required to notify the company if they are infected or exposed to Coronavirus.
- In case of a workplace exposure, affected employees will be sent to our occupational health provider and/or their personal physician for medical care.
- We will initiate appropriate steps to decontaminate the environment where such exposure occurred. All OSHA standards and guidelines will be followed on personal protective equipment, respiratory protection, bloodborne pathogens, and hazard communications.

### Prevention

There is currently no vaccine to prevent coronavirus disease 2019 (COVID-19). The best way to prevent illness is to avoid being exposed to this virus. However, as a reminder, CDC always recommends everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.

**EST. 1961**

- CDC does not recommend that people who are well wear a facemask to protect themselves from respiratory diseases, including COVID-19.
- Facemasks should be used by people who show symptoms of COVID-19 to help prevent the spread of the disease to others.
- Wash your hands often with soap and water for at least 20 seconds, especially after going to the bathroom; before eating; and after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty.

### **Treatment**

There is no specific antiviral treatment recommended for COVID-19. People with COVID-19 should receive supportive care to help relieve symptoms. For severe cases, treatment should include care to support vital organ functions.

People who think they may have been exposed to COVID-19 should contact their health-care provider immediately.
